MRS. GEORGE GOULD DEFENDS SOCIETY MOTHERS OF AMERICA

"Social Duties Never So Time-Consuming That a Woman Need Neglect Her Home" She Declares in Notable Article Entitled "Fashionable Life Versus Motherhood" in Forthcoming Issue of "The Club Woman."

REPUBLIC SPECIAL.

New York, Feb. 27.-Stirred by the charges that wealthy women and those high in the social scale are too much engrossed with other matters to give proper Gould, the wife of the financier and her-self the mother of five children, makes a

hood."

To add force to what the author says the article is profusely librarated with pictures of the Gould children, which seem to corroborate her statement that the children of society folk may be just as brilliant, healthy and serviceable to their country as those whose station in

as britiant, heating and services to their country as those whose station in life is different.

Mrs. Gould, who was Miss Edith Kingdon, says that fushionable life and the duties which devolve upon its devotees are never so time-consuming or so onerous that a woman need forget her home life. "Devotion to the domestic circle," she says, "comes first in every woman's list of duties, it ought to be, and, in the majority of cases is, the greatest pleasure that a woman can have. There may be some women who place the pleasures of social life above those which are found in the heart of one's family, where the children are kings and queens, but they are so few in number that they are distinguished only by their scarcity."

COMFORT CHILDREN BRING. COMFORT CHILDREN BRING.

Mrs. Gould speaks feelingly of the great joy and comfort which children bring to parents, and says that there is more real unalloyed pleasure in an hour's romp with healthy, wide-awake children in the nursery than there is to be found in the grandest ball that was ever given.

Speaking of the influence which children have upon their parents, Mrs. Gould declares that growing children are really the educators of their elders.

"It is as her children grow older," she says, "that a woman's growth, mentally, must keep pace with that of the active in the round of the God. It is a sher children are really the says, "that a woman's growth, mentally, must keep pace with that of the active in the round that the popular view of the fashionable woman's love for and attention to her fashionable with the formal that however. European mothers may treat their offspring, the American woman, whether she be rich or poor, fashionable or otherwise, is comparable only to her God. It is a sher children in the nurse when the proceeds to point out that the popular view of the fashionable woman's love for and attention to her children is wholly mistaken, and that however European mothers may treat their offspring, the American woman, whether she be rich or poor, fashionable or otherwise, is comparable only to her God. It is a sher children in the nurse which children is wholly mistaken, and that however European mothers may treat their offspring. The fashionable woman's love for an attention to her dath the popular view of the fashionable woman's love for an attention to her dath the popular view of the fashionable woman's love for an attention to her dath the popular view of the fashionable wholly an attention to her children is wholly mistaken, and that however European mothers may treat their offspring.

as much as any other class of

"There is absolutely no reason why sharing in the pleasures of social life is incompatible with de-

Denying that society women, as a class, are the butterflies they have been painted, and itrm in her conviction that the children of the rich and socially elect see more of their parents that the children of those who are differently situated. Mrs. Gould protests against the oft-heard expression that society women see their children only long enough to kiss them good-night.

"The light that shines about a fashionable woman's social functions," she says, "is as fierce as that which beats about a throne. It is the general belief that she has no time to do aught else but attend to the duties which a society life imposes upon her.

SOME POPULAR FALLACIES

SOME POPULAR FALLACIES "There are many persons who imagine amusements and her bridge that she considers a perfunctory good night kiss or a flying weekly visit to her nursery as the sum total of her duty to her God even charges."

LESSONS FROM THE FIRE AT BALTIMORE.

Costly Continental Trust Building and How It Met the Ordeal-Can Any Building Be Made Fireproof? - The Shutter Prob-

thing as a fireproof building?

Popular opinion iong ago answered no. The builders' yes has grown stronger each

scrapers, great steel skeletons sheathed with tiles or oricks in place of supporting walls, the experts claimed absolute immunity from tre loss. The public remained

The destruction of property and loss of "life in the old-style "absolutely fire-proof" buildings were too fresh in the memory. The new construction had never been put

best and most indisputable references ever libe mailed to you for the asking. If you be a few more pronounced than in the last few years, is that clothing manufacturers buy in smaller quantities and in a greater variety of lines. Formerly a manufacture would often place, at the beginning of the season, his order for all the goods he would require until the next season. Now he buys only what is absolutely required for the samples and early orders. This gives him opportunity to learn what styles prove popular with the public, and then he sends in his reorders, taking chances on the mills having the goods which he desires.

The mills, accordingly, are getting accustomed to smaller orders at the openling of a season and larger reorder business.

But the supreme test of all that constructive science has accomplished came last month in Baltimore.

No trial of the resisting power of the modern steel-framed skyscraper could be a cree complete.

By the time the path of flame, whipped by a thirty-mile gale, reached the business heart of the city there was no power to check it other than the great monuments of fluancial power which have marked Baltimore's progress in the last five years.

As the devouring sea of fire swept on from the warehouse district, crumbling stantite foundations as if they were plaster, Baltimor-ans looked to the great Calvett, Equitable and Union Trust buildings to stem the tide.

Water and dynamite, the fire fighter's weapons, were by this time utterly useless. Dynamite not only falled to clear a path big enough to give the fire a pause, by the string utilities, by breaking the windows of the tall fire-resisting buildings, making a draft that drew the flames and turned the interior into immense furnaces that scattered deadly firebrands before the gale.

Baffiled But the supreme test of all that construction had never been put BAFFLED BY THE SKY-SCRAPER.

Squarely in the center of the fire's path, at the corner of Caivert and Baltimore streets, stands the Continental Trust building, the atest and most modern edifice in the city.

It is sixteen stories high, built on a steel frame and faced above the two lower stories, which are of stone, with fire-proof brick.

stories, which are of stone, with lire-proof brick.

The floors are on noncombustible tiling and cement. On the opposite corner stood, and strange to say, still stands, the little the story red brick Colonial banking-house of Alexander Brown.

The fire, as if disdaining to stop for this little bank, made a tremendous, direct onslaught on the skyscraper.

Into every window sprang the flames, and in a few moments the great tower seemed like one vast chimney of fire, hurling heavy burning embers on the defenseiess buildings under its lee.

No one doubtod for an instant that the building itself would fall, a mass of twisted iron and bricks. In fact, the press dispatches told the story of its annihilation.

But when morning dawned the great Continental Trust stood guarding the \$200.002.002 in its vaults as deflantly as it did before an enemy swept over and through it. Every particle of woodwork and furniture of its luxuriously appointed offices had disappeared, but, with the exception of a few of the outer bricks that peeled from the rear walls, the building itself was apparently as sound as the day it was built.

As soon as the steel girders had cooled sufficiently to allow the use of instru-

had disappeared, but, with the exception of a few of the outer bricks that pesled from the rear walls, the building itself was apparently as sound as the day it was built.

As soon as the steel girders had cooled sufficiently to allow the use of instruments, a representative of the architect and of the company that furnished the steel work found that not a floor was structurally damaged and that every beam and girder had held its own without warping.

The cream-colored fireproof bricks of the facade showed no trace of the battle. Major Ramsay of the American Bridge Company, after a careful inspection of the building, said it could be restored at a cost of not higher than 40 per cent of its or the salvage at 59 per cent.

From this first great duel between a modern skyscraper and a conflagration beyond all human control, the science of building will learn some vital lessons. It is now definitely proved that the elemental structure, with brick walls and fireproofed tiled floors, can be built to resist the flercest of fires.

THE NEXT PROBLEM. Granted this important Q. E. D., the next problem to be solved is a method of keeping the fire from eating its way into the inflammable interior.

No matter how carefully built, the modern office buildings must necessarily be filled with highly inflammable furniture

No matter how carefully built, the modern office buildings must necessarily be filled with highly inflammable furniture and material.

The thought occurs at the very first glance at the gutted Continental Trust Building that if the windows had been as impervious to the heat as the outer bricks, the whole structure, with its contents, would have been saved.

Fireproof shutters, mounted on steel casements, hermetjcally closed, might have brought the great building unscathed through the flercest ordeal in the history of American fires. There is no known kind of glass or method of setting it that could have resisted the heat.

Objections will be made that you never can be sure of having all the shutters closed in time of fire.

The same criticism was made when watertight buildhead compartments were proposed for ocean steamships.

Improvements on the original bulkhead idea, however, have saved many an ocean liner. The bulkhead doors are controlled from the steamship bridge. One lever closes them instantly throughout the ship. In a similar manner it could be possible to close every airtight shutter in the skyscraper.

The shutter problem is perhape as vital to the life of our abnormally tall city buildings as the bulkhead is to the ocean flyer of 20,000 tens.

The Baltimore fire showed that in a general conflagration the tall buildings bear the brunt of the attack.

All of the new one-story banks, such as the Union National, Alexander Brown's, the International Trust and the Safe Deposit Company went through the fire with comparatively little loss.

The fire passed over them, as it were, and where it could not force in the windows, left them practically unharmed.

The most remarkable instance of this is in the escape of the Safe Deposit Company, on South street.

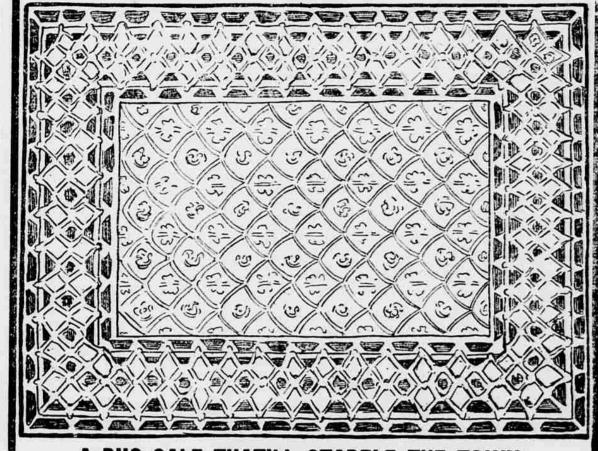

Its home is a two-story brick building, recently remodeled, but without any pretensions to absolute fireproof qualities.

Every building within a block of it is literally in ashes, but the Safe Deposit building escaped with the cracking of the glass windows

PROGRESS IN BUILDING. No one can view the shell of the Continental Trust building without feeling that we have made solid progress toward pro-tection from fire. It seems but a step to

business men in his invention for the construction of iron buildings, persuaded Mr. Abeil to let him undertake the work.

As a result the Sun owned wbut was said to be the first cast iron building in the world. The architect was Mr. Haiffield of New York.

It was four stories in height, had generations was considered absolutely proof against fire.

To-day there is hardly enough of the building left above the ground to tell of what it was made.

ONLY CLOCK REMAINS.

The clock on the sidewalk is all there is to mark the ploneer of fireproofing, while the great Continental Trust Building, with thin veneering of bricks, stands externally unchanged.

The contrast is symbolic of what has been accomplished by builders in half a century.

And yet there are those who draw another lesson from the fire and call for the prohibition of tall buildings. "The highest and most modern buildings in Baltimore," writes one observer, "instead of checking the progress of the flames, speedily be-

came blazing chimneys, from whose summits volumes of sparks were poured forth, carrying the conflagration to a considerable distance.

"Hence, it is not improbable that an attempt will be made in the Maryland metropolis to limit by law the height to which structures may hereafter be raised. "This is an issue which has often been debated, and certain restrictive measures are now in force in Boston."

This is a narrow view. The fact that the tall buildings are standing structurally intact in a fire that literally melted the solid granite pillars of the United States Storehouse as if they were wax suggests that they can be made a strong barrier to fire instead of a menace to their smaller neighbors. The walls are fireproof. Is it beyond inventive skill to keep the fire from entering the windows? In the answer would seem to lie the security of our business homes.

box at No. 47 North State street. When found twenty minutes later Kimball was partly suffocated, and it was some time before he was able to tell his story.

We Will Buy

A 50c Bottle of Liquozone and Give It to You to Try.

Liquozone is the only way known to | paratus and 14 days' time, these gases | kill germs in the body without killing the tissues, too. It is the only way to end the cause of any germ disease. It is also a vitalizing tonic with which no

show you what it can do

We Paid \$100,000

For the American rights to Liquozone-the highest price ever paid for similar rights on any scientific discov-ery. We did this after testing the product for two years, through physicians and hospitals, in this country and others. We paid it because Liquozone does what all the skill in the world cannot do without it. Any drug that kills germs is a poison, and it taken internally. Every physician knows that medicine is almost helpless in any germ disease,

Not Medicine.

Liquozone is the result of a process which, for more than 20 years, has been the constant subject of scientific and chemical research. Its virtues are derived solely from gas, made in large part from the best oxygen producers. By a process requiring immense ap-

other known product can compare.

It is new in America, and millions | Liquozone are exhibitanting, vitalizing. who need it don't know of it. For that reason, we make this remarkable offer. We will buy the first bottle and an offer of \$1,000 for a disease germ give it to you if you need it. We will that it cannot kill. The reason is that do this gladly to let the product itself germs are vegetables; and Liquozone -like an excess of oxygen- is deadly to vegetable matter. That is why Liquozone kills every disease germ, and with a product which to the human body is life.

Germ Diseases.

These are the known germ diseases. All that medicine can do for these troubles is to help Nature overcome the germs, and such results are indirect and uncertain. Liquozone kills the germs, wherever they are, and the re-sults are inevitable. By destroying the cause of the trouble, it invariably ends

the disease, and forever.
